

Oz Maze – The clash of the witches

São Paulo, Brazil, 2016 – Cruel Byte is pleased to announce the release of “Oz Maze” to mobile platforms. The game is free to play and available to download on Google Play and App Store.

In “Oz Maze” you control Evanora, the Witch of the East in a labyrinth trying to arrive in the center to get the item that can give her INFINITE POWERS. But in the other side there is an enemy: the terrible Theodora, the Witch of the West, that obviously wants the same item! Then you should run to reach the center of the maze and become the most powerful witch!

(click or tap to watch the trailer)

But don't think that the other witch will be your only challenge. When you are moving, the labyrinth magically twists and/or turns, changing the controls as a mirror effect. Some seconds after, everything turns around again, then you must think precisely each step, and don't let your head get turned along with the maze.

Oz Maze was developed using Unity, and features nice looking 3D voxel art graphics. The whole game was conceived to give you the experience of a cubitized world, with nice little touches to it. More than 90 levels are waiting to challenge you, and there are still lots more levels to come!
